

Supply Chain Assessment And Management

Organizations need capable oversight and management of clinical and commercial supply chain operations to ensure a continued supply of goods to the clinic and the market. DSI provides that oversight at a point as early as the acquisition of regulatory starting material to delivery of clinical trial material to sites for clinical studies or distributors for commercial products.

DSI can assist with overall strategy, implementation, and ongoing supply chain management. Our supply chain experts will guide your company through all business aspects that could impact your supply chain, including vendor selection, manufacturing planning, raw material sourcing/planning, cost of goods, and inventory planning. DSI will help maintain your clinical trial material to keep your studies running smoothly and prepare you for launch.
